Personal Blog Application

1. Introduction :

The Personal Blog Application is designed to manag fictif blog posts, providing functionalities to add, modify, and delete posts.

2. Architecture :

Components:

The application architecture is based on several components:

Add-Post-Form: Component responsible for adding new posts.

Header: Navigation component for seamless user experience.

Landing-Page: The initial landing page of the blog.

Post-Details: Component displaying detailed information about a specific post.

Post-List: Component responsible for listing all available posts.

Services:

The Post-Service manages the communication between the components, handling functionalities like adding, modifying, and deleting posts.

3. Functionality and Features:

The key features of the Angular Personal Blog Application include:

Show Posts: Displaying a list of blog posts.

Add Post: Capability to create and add new posts to the blog.

Delete Post: Removing existing posts from the blog.

Modify Post: Editing and updating the content of existing blog posts.

4. User Interface (UI):

The user interface of the application is designed to be simple, elegant, and user-friendly. It focuses on an intuitive layout and smooth navigation for an enhanced user experience.
